Project Title: Streamlining IT Procurement – Automating Standard Laptop Orders with Flow Designer

Platform Used: ServiceNow (Service Catalog & Flow Designer)

Project Type: IT Service Management (ITSM) Process Automation

Team ID: SWTID-2026-9769

Phase 1: Ideation Phase

1.1 Background

In most organizations, employee laptop procurement is still handled through manual, email-driven communication between the employee, their manager, the IT department, and the procurement/vendor team. This ad-hoc process is slow, inconsistent, and difficult to track.

1.2 Problem Statement

There is no centralized, trackable system for raising and fulfilling a standard laptop request. Requests are scattered across emails and chat messages, approvals are informal and undocumented, there is no single source of truth on request status, and IT teams spend significant time manually coordinating approvals and procurement instead of focusing on fulfilment.

1.3 Idea / Proposed Solution

Build a self-service Standard Laptop Order catalog item on the ServiceNow Service Catalog, backed by an automated approval-and-fulfilment workflow built in Flow Designer, so that:

- Employees raise a request through a simple, guided form.
- Manager approval is triggered automatically.
- Once approved, a fulfilment task is auto generated for the IT/Procurement team.
- The requester is notified automatically at every stage (submitted, approved/rejected, fulfilled).
- All requests are logged, timestamped, and reportable.

1.4 Objectives

1. Eliminate manual, email-based laptop request handling.

2. Reduce request-to-delivery turnaround time.
3. Introduce a standardized, auditable approval chain.
4. Provide real-time visibility of request status to employees and IT.
5. Reduce the administrative load on the IT support team.

1.5 Scope

In Scope: Standard/pre-approved laptop models only, single-level manager approval, auto-generated IT fulfilment task, email/notification updates.

Out of Scope: Non-standard/custom hardware requests, multi-level financial approval for high-cost devices, vendor purchase-order integration (can be a future enhancement).
